

Backslash Static Code Analysis Report

Project: AP.SXR.MigratedCode

Included Repositories

AP.Affable.Packages.BE (main)

AP.SXR.Classifier.KB (test-upgradation)

AP.SXR.Env (migration-code-with-rapidstrike)

AP.SXR.Benchmarks (test-upgradation)

AP.SXR.FrontEnd (development)

Generated on November 12, 2025

Findings Summary

Triggerable Code	46
Triggerable Packages with Known Exploits	0
Triggerable Packages with EPSS >= 10%	0
Triggerable Packages with Critical CVSS	0
Triggerable Packages with High CVSS and EPSS >= 5%	0
Reachable Packages with Known Exploits	0
Reachable Packages with EPSS >= 10%	0
Reachable Packages with Critical CVSS	0
Reachable Packages with High CVSS and EPSS >= 5%	0
Known Malicious Packages	0
Private Keys Found	0
Secrets Found	0

Triggerable Code

SSRF in AP.SXR/AP.Affable.Packages.BE

Project: AP.SXR.MigratedCode

Type: Server-Side Request Forgery (SSRF) (CWE-918) [A10:2021 - Server-Side Request Forgery (SSRF)]

Description:

SSRF is an attack vector that abuses an application to interact with the internal/external network or the machine itself.

Recommendation:

Implement strict input validation and sanitization for any URLs processed by the application. Use a whitelist approach to ensure only allowed domains are accessible through URLs. Consider using libraries such as Apache Commons Validator for URL validation. The sanitization or validation function should be tailored to the application's specific needs to prevent SSRF vulnerabilities.

Sample Vulnerable Code

```
String urlString = request.getParameter("url");
URL url = new URL(urlString);
```

Sample Fixed Code

```
String urlString = request.getParameter("url");
if (isValidUrl(urlString)) {
    URL url = new URL(urlString);
} else {
    throw new IllegalArgumentException("Invalid URL");
}
// The isValidUrl function can be modified based on application requirements.
```

Vulnerabilities

Repo: AP.SXR/AP.Affable.Packages.BE

File: AP.Affable.Packages.BE/

AP.Affable.Packages.BE/AP.CDO.Classifier.Client/Classifier/Internal/ClassifierService.cs :28

Vulnerable Code Snippet:

```
return await httpClient.GetAsync<List<int>>(url);
```
